TABLE S1: Model parameters

SUPPORTING FIGURES

FIGURE S1: **Leaf turnover decreases with leaf-construction cost.** Data from (Wright *et al.*, 2004) for 678 species from 51 sites, each point giving a species-average. Lines show standardised major axis lines fitted to data from each site, with intensity of shading adjusted according to strength of the relationship.

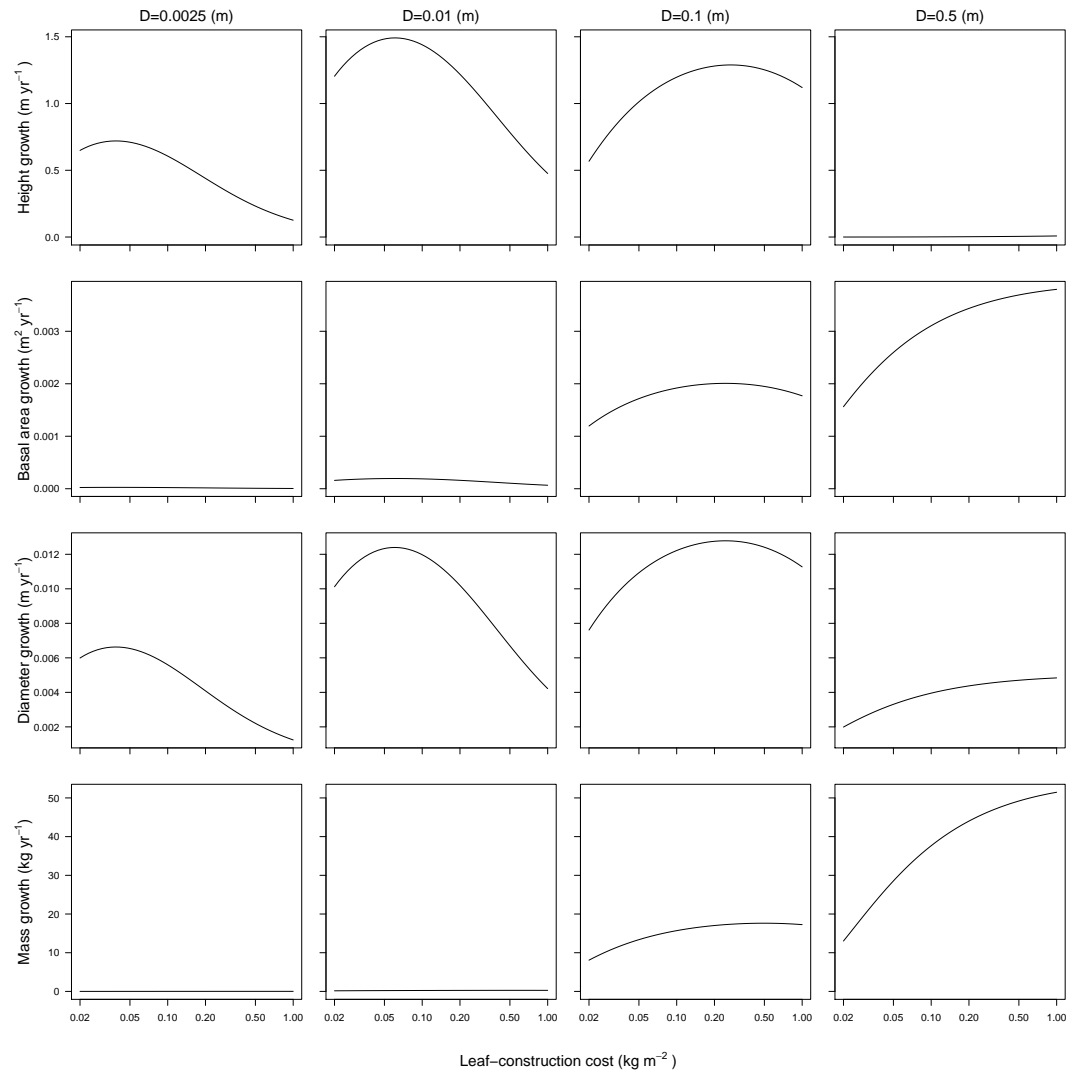

FIGURE S2: The expected correlation between leaf-construction cost and growth rate changes with plant size.

FIGURE S3: The expected correlation between leaf-construction cost and relative growth rate changes with plant size.

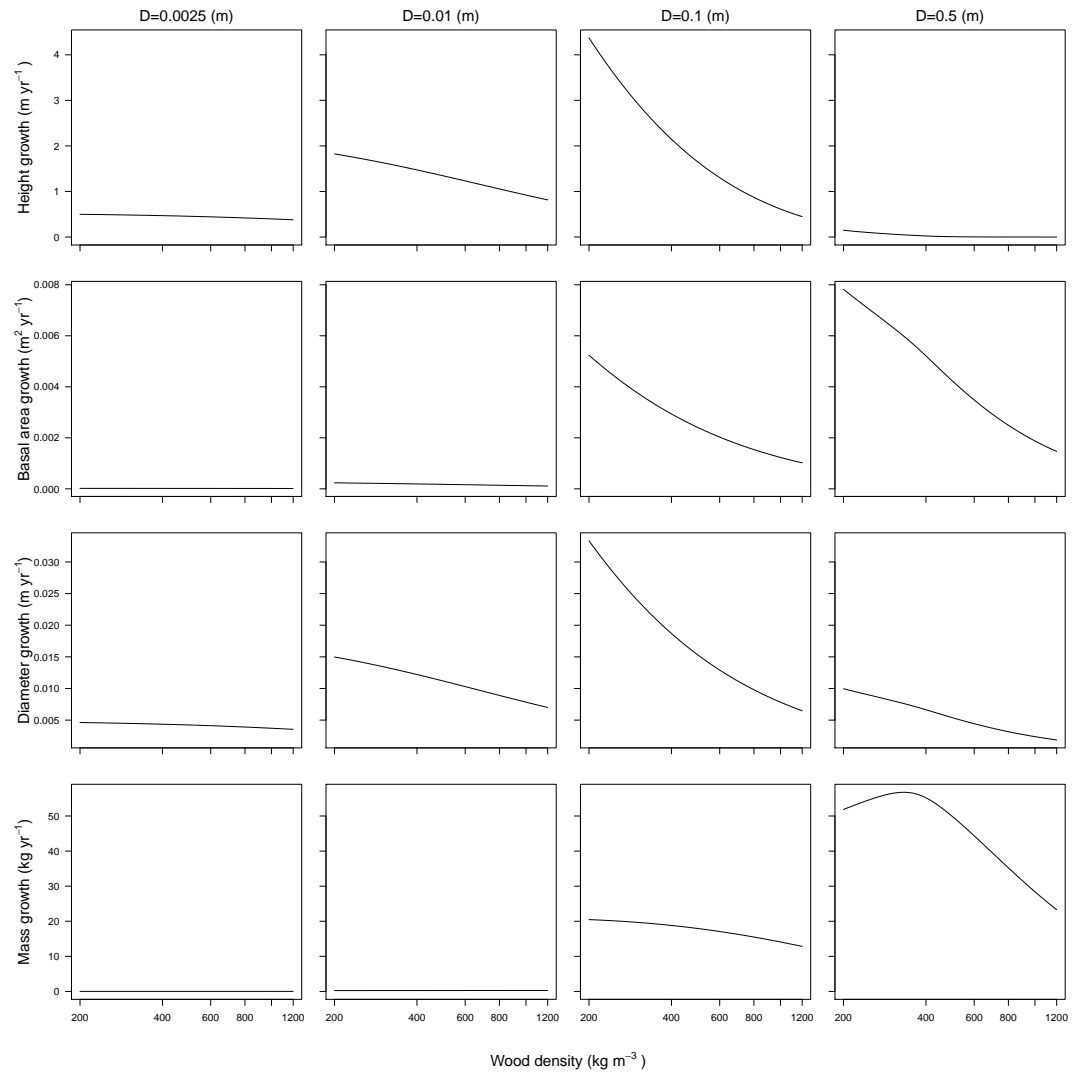

FIGURE S4: The expected correlation between stem-construction cost and growth rate changes with plant size.

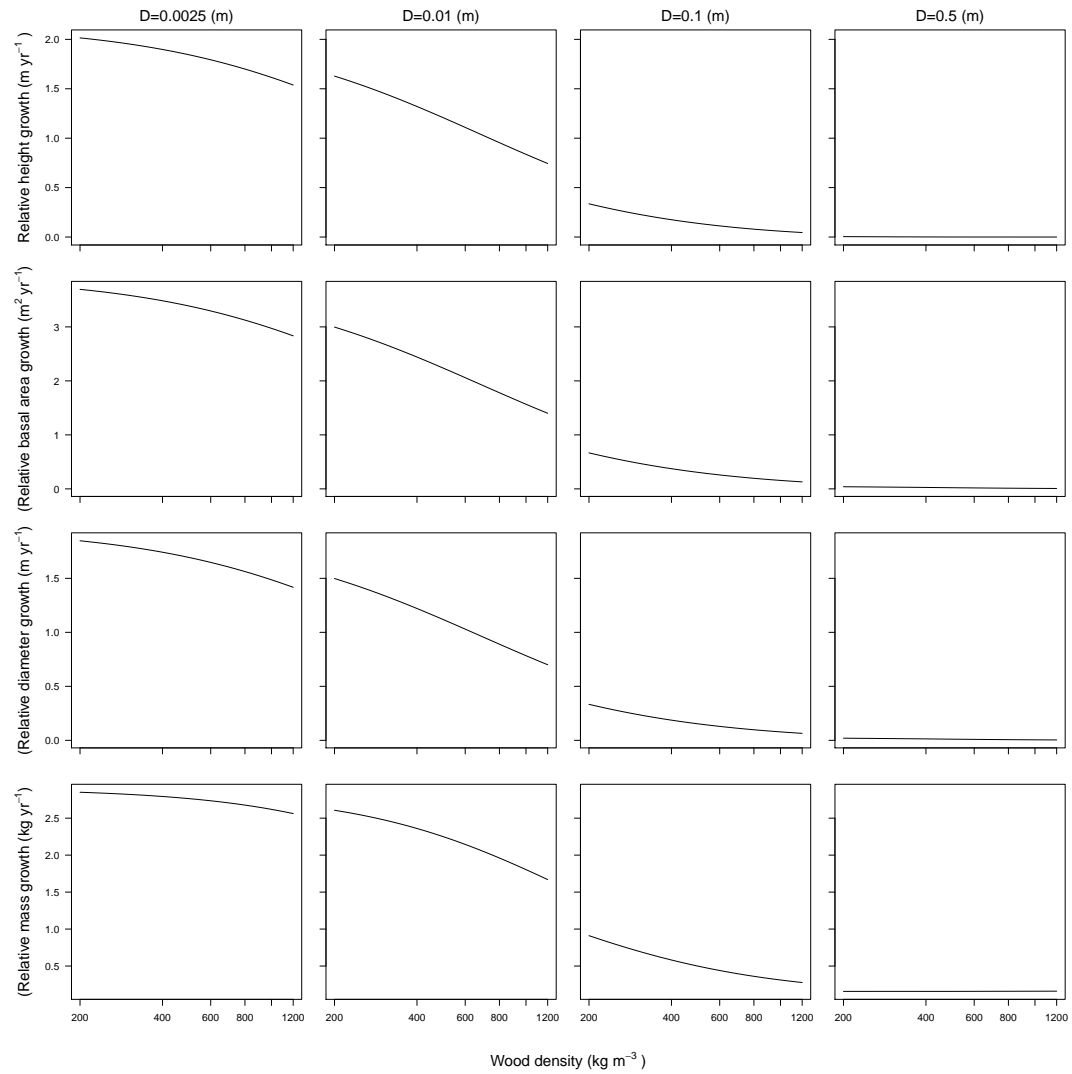

FIGURE S5: The expected correlation between stem-construction cost and relative growth rate changes with plant size.

FIGURE S6: The expected correlation between maximum height and growth rate changes with plant size.

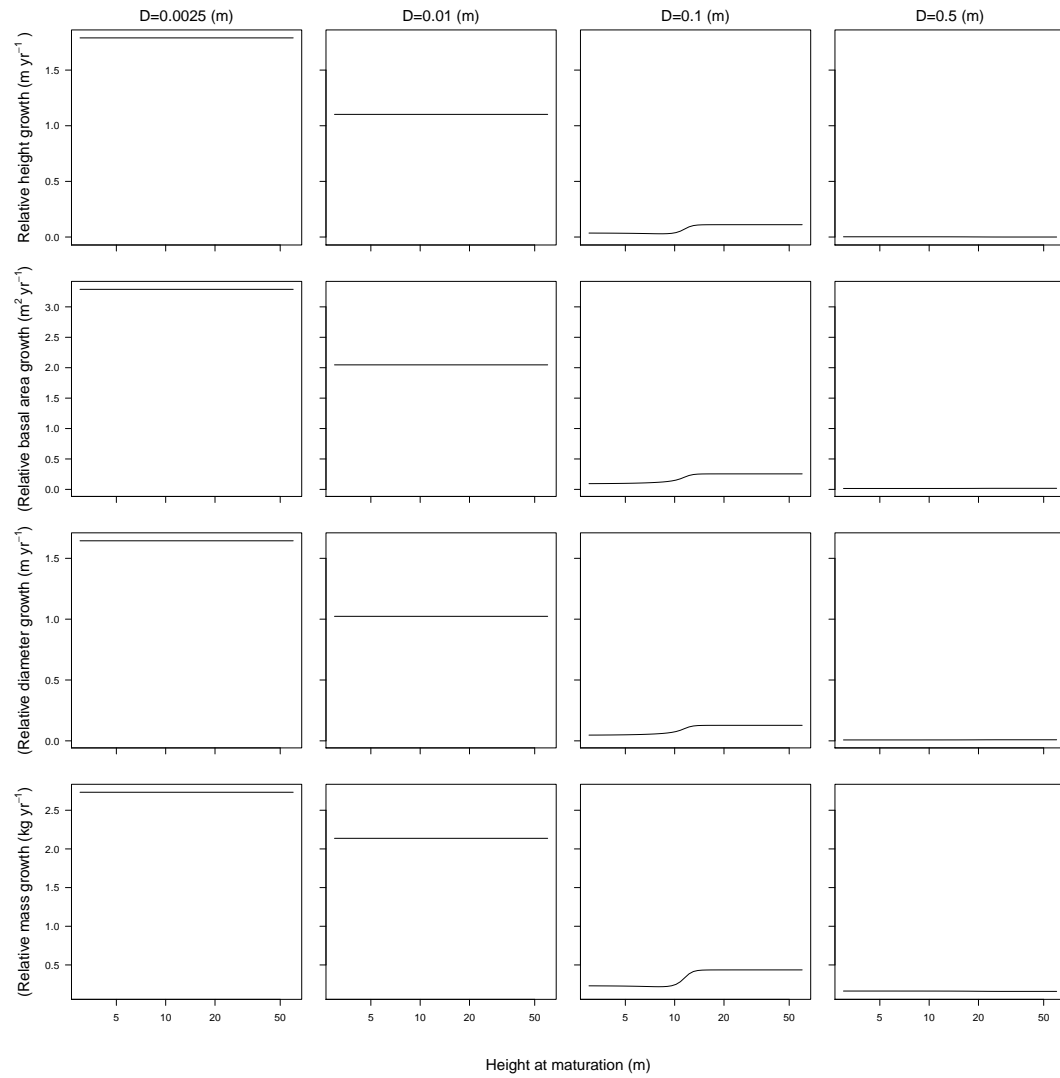

FIGURE S7: The expected correlation between maximum height and relative growth rate changes with plant size.
